Figure 5

**Step 1.** If your Soft Box has Four Frame Rods, move on to the next step. Connect one small rod into one larger looped rod. Insert the end without peg (small rod) into the large loop (small rod) into the large loop on looped rod.

**Step 2.** Insert metal rods (large peg) into four opposite holes of the speed ring; leaving one hole in between each rod unused.

**For Soft Box #2522,** insert two Frame Rods consecutively into holes on the speed ring. Leave two holes open on each side then insert two more consecutive rods.

**Step 3.** Now locate the pockets on each corner of the Front Diffuser Panel (pockets are located on side with thin velcro trim). Insert a Frame Rod into one of the corner pockets (Figure 3).

**Step 4.** Then insert the Frame Rod directly across into the corresponding pocket (Figure 4). Repeat steps above with the two remaining Frame Rods.

Now the Soft Box Frame is complete.

Figure 7

Figure 8

**Step 5.** Attach the Internal Diffuser (included in some soft box models) to the Soft box frame. Use the clips on the corners of the diffuser to clip it to the loops on each Frame Rod.

**Step 6.** Take the Reflector Hood and slide it over the frame, lining up the corners and securing the velcro trim around the entire face of the soft box.

You are now ready to mount the soft box to the front of your light.

## Opening Vents:

Unfasten velcro to expose flap. Refasten corners of vent flap towards center of velcro strip on Reflector hood (aprox. 1 in).

**Finished Soft Box**

**Egg-Crate Grid  
(Optional)**
